WE'RE INVESTED IN PROVIDING THE VERY BEST IN DAY-TO-DAY SECURITY.

ABOUT US

1nteger is a division of one of New York's premier IT and Managed Service providers, ICS.

ICS, one of the largest privately held technology managed services firms in the Northeast, with New York offices in Endicott, Syracuse, and Ithaca plus a New England office in Auburn, MA. ICS has been ranked as the top IT provider in Central New York by the Central New York Business Journal and is now featured on the Channel Futures MSP 501 list. Since 1986, ICS has worked with clients to understand their technology needs and develop solutions to meet those needs. For more information, please visit www.icscomplete.com

As part of that mission, in the early 2010's, cybersecurity became a major part of the IT industry, and ICS responded with a dedicated security division to better serve clients.

PROTECTING WHAT MATTERS.

Effective cybersecurity is more than just running tools. It takes a proactive approach with hands-on management. 1nteger Security has the technical expertise and experience to guide your business long-term and continually improve your security posture. The threat landscape is changing — meaning our standards must evolve as well in order to better serve our clients. Targeted attacks, ransomware and advanced social engineering are raising the bar every day. Having a strong defense-in-depth strategy is the answer. Contact us today to see how 1nteger Security can help you protect what matters most.

LET'S WORK TOGETHER TO KEEP YOUR ASSETS SECURE.

OTHER SERVICES

Vulnerability Management

Eliminate point-in-time snapshot with a proactive vulnerability management service. Perform regular internal, external and web applications scanning to identify and prioritize network security threats. Access to a Co-Managed Portal to review, detailed remediation steps and executive reporting and dashboards

Penetration Testing

Penetrations Tests, commonly referred to as a "Pen Test," are proactive attempts by security professionals to actively exploit discovered vulnerabilities and break into, or hack, a corporate network and the systems within.

Penetrations Tests are conducted in one or combinations of the following scenarios:
- Externally from the internet.
- Internally within a company's network – also known as a breach simulation.
- Via Wi-Fi in close proximity to a physical location.
- Through social engineering via phone, email (phishing) or impersonating a trusted vendor and gaining physical access.

· NIST 800/171
· CMMC
· NY Shield Act
· PCI DSS
· ITAR

Cyber Risk Assessments

The security posture of a company is never static. Subject to an ever-evolving cybersecurity landscape, novel threats are discovered daily. As cyber criminals devise new attack fronts, malicious activity grows worldwide in volume, frequency, and severity – increasing your organization's risk for financial and operational crisis.

Knowing cybercriminals are plotting attacks on any front they can reach, our cyber risk assessment intentionally goes well beyond just a technical focus. We take a 360-degree view of your organization's processes and technology to create a comprehensive understanding of your risk posture. Our team evaluates the maturity of current information security capabilities, identifies vulnerable areas, and provides prioritized recommendations for remediation.
